Education

JAIN (Deemed-to-be-University) Karnataka, Bangaluru
B.tech in CSE-Cyber Security *Aug. 2023 – May 2027*

Experience

Cybersecurity CTF Player (TryHackMe)
Independent Learning & Skill Development

- Actively participate in Capture the Flag (CTF) challenges on TryHackMe.
- Develop hands-on skills in penetration testing, vulnerability assessment, network security, and threat analysis.
- Earned badges and completed multiple rooms covering topics such as cryptography, privilege escalation, web exploitation, and malware analysis.

Projects

Port Scanner – Cybersecurity Project

- Developed a custom Python-based port scanner to identify open, closed, and filtered ports on target systems.
- Implemented TCP/UDP scanning and multi-threading to improve performance and scan efficiency.
- Utilized socket programming and Nmap integration (optional) for advanced scanning features.
- Added real-time scan result logging and banner grabbing to collect service information.
- Designed a user-friendly interface/web app (if applicable) to allow users to enter target IPs and view results.

XSS Brute Force Payload & Automation Tool

Python | Web Security | Penetration Testing | Automation

- Developed an automated XSS brute-force attack tool to test web applications against a wide range of malicious payloads.
- Implemented payload injection logic using HTTP request automation to identify vulnerable input fields.
- Created a custom payload dictionary for reflected, stored, and DOM-based XSS attacks.
- Integrated response analysis to detect successful XSS execution through script reflection and HTML injection.
- Added multi-threading support to improve execution speed during large-scale payload testing.

Health Monitoring & Wellness Assistance Application

Python | Machine Learning | Data Analytics | UI/UX

- Developed a full-stack wellness tracking application to monitor daily health metrics such as water intake, mood, meal logging, workout duration, and sleep cycle.
- Implemented secure user authentication, profile management, and personalized dashboard to enhance user experience.
- Integrated data visualization and real-time wellness tracking for better lifestyle awareness.
- Prepared and preprocessed a unified dataset of 731,000+ health records with 26 parameters for analysis and predictive modeling.
- Applied ML-based risk detection logic to identify potential wellness issues (stress, dehydration, irregular activity).
- Designed an interactive UI for ease of use, improving user engagement and daily compliance

Technical Skills

Languages: Python, JavaScript, HTML, SQL, Bash
Technical Tools: Wireshark, Burp Suite, splunk, Metasploit Framework, Nmap, kali lunix
Certifications: Google cybersecurity, IBM Security fundamantal, Cisco Networking basic
